---

## SUMMARY

Software engineer with 3+ years building B2B SaaS and internal business applications. Day to day I work with Node.js, TypeScript and Vue/React on the application side, and with MongoDB, PostgreSQL, Redis and message brokers (IBM MQ, RabbitMQ, MQTT) on the integration side. I have shipped data pipelines that move CSV, XLSX and EDI-style records between services, troubleshoot message-flow issues end to end, and supported small teams of senior and junior developers. Currently working through C#/.NET fundamentals.

## PROFESSIONAL EXPERIENCE

### Full Stack Developer

Apr 2024 – Present

*Customs City Platform — Remote contractor (company based in Toronto, Canada)*

- Develop and maintain a multi-tenant customs brokerage SaaS for U.S. CBP filings on FeathersJS (Node.js + TypeScript), MongoDB and Redis, covering entry summaries, statements, documents and HTS classifications across the platform's service architecture.
- Write MongoDB aggregation pipelines that join multiple collections in the customs entry domain to produce reconciliation reports and CSV exports covering CBP payment events, MBOL/HBOL numbers and PGA/FDA flags.
- Diagnose CBP message-flow issues across IBM MQ and RabbitMQ: sender channel restarts, VPN drops, queue depth and pm2 process monitoring; documented the troubleshooting workflow for the team.
- Built a browser File Manager that ingests CSV/XLSX, parses inside Web Workers, validates rows and sends JSON payloads to the API; wrote reusable FeathersJS hooks for validation, role-based authorization and audit metadata.

Feb 2023 – Feb 2024

### Full Stack Developer

*Best Reference — Morelia, Mexico*

- Built features for an internal quotation and project management system in Laravel, Vue.js and MySQL, used by sales and operations teams.
- Implemented REST endpoints (Laravel Resources, Form Requests, Eloquent) and Vue components for quotation, approval, search and filtering workflows; contributed to refactors, code reviews and basic automated tests.

### Freelance Software Developer

2022 – Present

*Multiple clients — Mexico, remote*

- Architect and develop the MVP of a multi-tenant school management SaaS (Scholar / IECP): Next.js front end, Node.js backend and PostgreSQL with tenant-aware schemas; entities cover campuses, rooms, groups, students, schedules and payments. Project site: [iecp.mx](http://iecp.mx).
- Build an early-stage IoT/GPS tracking platform (GoalTime, in development) for agriculture: ESP32 devices over MQTT to an EMQX broker, FeathersJS APIs, and a Node service that uses the `$events/message_delivered` system topic to confirm command delivery. Running on a development environment in Docker Swarm with Dokploy, Traefik and Let's Encrypt.
- Stand up Docker-based deployments on VPS providers (Traefik, Dokploy, GitHub Actions) and debug cross-stack issues such as Traefik routing, container healthchecks and queue back-pressure.

## EDUCATION

### B.Sc. in Computer Engineering

Expected Jun 2026

Universidad Michoacana de San Nicolás de Hidalgo — Morelia, Mexico. Thesis (in progress): "Integration of TDD, Domain-Driven Design and Clean Architecture in an Academic Management System with relational databases."

## TECHNICAL SKILLS

- **Languages & Frameworks:** JavaScript, TypeScript, PHP, Python, SQL, Bash, C/C++ (learning C# / .NET); Node.js, FeathersJS, Express.js, Laravel, REST (familiar with NestJS, GraphQL); Vue.js, React, Next.js, Tailwind CSS.
- **Data, Integration & Messaging:** MongoDB (aggregation pipelines), PostgreSQL (Neon), MySQL, Redis; IBM MQ, RabbitMQ, MQTT (EMQX), BullMQ, n8n; CSV / XLSX / EDI-style ingestion pipelines.
- **DevOps, IoT & Practices:** Docker, Docker Swarm, Traefik, Dokploy, GitHub Actions, Linux, Cloudflare R2 / S3, AWS / Azure / GCP fundamentals; ESP32 with MQTT; Clean Architecture, DDD, TDD, Git, Agile / Scrum.
